ENERGY SAVING MEASURES

- Lightbulbs replaced by LEDs;
- Taking maximum advantage of natural light;
- New windows with good insulation - lowering the heating demand;
- Switching-off equipment during night & breaks;
- Reducing printing visual projects to our customers, offering possibility to send them via email.

MOTIVATION

We are a small family company and since our establishment we were always looking for different ways to make our business more energy efficient and more sustainable.

In my opinion, the most important is to implement energy conservation through employee participation and engage the entire team in this process. It came up very efficient in our business when we started being more conscious and careful about using electronical devices.

When talking about saving the energy at the workplace, our main goal is not only to balance the financial budget and reduce costs, but also to live in a better environment.

VERONIKA SZOMBATH
Store Manager

RESULT

By implementing non-technical energy efficiency measures and replacing the lightbulbs by LEDs in our showroom we noticed a reduction of company's energy bill by 7%.

By engaging employees into energy saving activities and changing their habits we contributed to the mission of promoting energy efficiency at the workplace.
